

# Intuitive Facility Scheduling Software

ML Schedules, from MasterLibrary, was built for the high demands of school districts. It has everything you need to easily and efficiently manage your online facility scheduling (except the high price of other software programs).

ML Schedules Software has streamlined the building use request process for our district. The software is as convenient for the people making requests as it is for the people processing them. I have used both paper requests and electronic form requests in the past. I couldn't imagine ever going back now that I've seen what ML schedules can do.

Jason Czarny / Athletics Director / Onondaga Central School District

Not only does our software make scheduling quicker, easier, and more cost efficient – it also features a very clean and intuitive interface that makes working inside of it simple. You'll be able to get employees or community members up and running in a very short amount of time.

## Benefits of ML Schedules

### Improve Communication

Keep all departments on the same page with event schedules including setup and/or support needs. Automated reminders and notifications ensure essential people are always in the know.

### Save Time

Dramatically reduce request processing times from days to minutes with intuitive processes and forms. Automated notifications eliminate the need for any manual emails or calls.

### Reduce Expenses

Decrease the labor needed for processing requests, while saving on software subscription costs. Built in invoicing function and acceptance of online payments also allows for costs to be recouped sooner.

### Eliminate double-bookings

Enjoy the freedom of creating varying rules that eliminate the headache of double-booking a space (unless you want to). Rules allow the approver to show the space as open, unavailable, or the approver can choose which request to approve.

# Elevate Efficiency & Streamline Processes

## Custom Forms & Fees

Personalize and manage your facility requests with ease. You have the power to configure ML Schedules® to the specifications of your district's facility request policies and processes.

## Staff Notifications

Say goodbye to the email chains chasing staff support or looping team members into your building's event calendar. Automatically notify support staff required for a scheduled event.

## Payments & Invoicing

Easy integration with other K12 online payment platforms allows you to effortlessly generate invoices and manage your A/R on space reservations.

## Visual Reporting

Our visual dashboards provide real-time insights into the status of all of your spaces, sliced and diced any way you want to see it.

## Conflict-Free Scheduling

Never double book your space again! (Unless you want to.) Set conflict rules and eliminate the need for staff to check availability of spaces.

## Bulk Updates

Perform bulk updates across your entire calendar for all groups and spaces in just one simple click.

# Leverage Data with Powerful Integrations

Share data across applications by utilizing productivity tools you already use. Our API automatically pushes and/or pulls data from other software programs, allowing you to work the way you want to.
